Situation Assessment Major Challenges Gap analysis

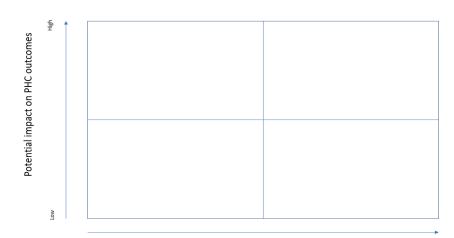

Assessment of Primary Health Care in Palestine: 2023¹

DRAFT FOR CONSULTATION: NOT FOR FURTHER DISSEMINATION

PHC APPROACH PHC LEVERS PHC RESULTS Integrated health services 1. Political commitment and leadership with an emphasis on Improved access, 2. Governance and policy frameworks utilization and quality primary care and essential 3. Funding and allocation of resources HEALTH FOR AL 4. Engagement of communities and other public health functions stakeholders Improved participation, **Empowered people** 5. Models of care health literacy and 6. Primary health care workforce and communities care seeking 3 MONETHIN 7. Physical infrastructure 8. Medicines and other health products 9. Engagement with private sector providers 10. Purchasing and payment systems 11. Digital technologies for health **Multisectoral policy Improved** 12. Systems for improving the quality of care Universal determinants of health and action 13. Primary health care-oriented research Health 14. Monitoring and evaluation Coverage

Priority Investment Areas

- Undertake a rapid prioritization exercise
 - Use a prioritization matrix
- Criteria for prioritization
 - Expected impact
 - Feasibility
- Identify areas for investment

Objective 1 Enhance primary care infrastructure to improve geographic access (based on population growth projections until 2035)

The physical infrastructure can be upgraded and equipped so that each health facility can provide a full range of family medicine services. Thereby, allowing patients to have a single main point of service for most general health needs. For the sake of planning, this is referred to as level 3+. This is a long-term objective, with several activities staged over time and others requiring immediate or continued action. Due to recent damages to facilities, a rebuilding component will also have to be considered.

NO.	Activities	Output	Mechanism of impact	Timeline								
	Action 1 Establish new level 3 or 4 facilities to ensure access within 30 minutes according to the situation											
1.1.1	Import the detailed infrastructure assessment including density, building specifications, and human resources into a digital system	Inventory of current facilities, with access and quality data in a computerized format for real-time situation analysis including: • Energy supply • WASH • Service package • Workforce • Population served • Etc.	Baseline available for refined planning, implementation, and monitoring	Short-term								
1.1.2	Develop an infrastructure master plan for primary care, including human resources, based on population growth until 2035 and focus on areas with lower geographic access	Density and building specifications that match the current service delivery model with updated benchmarks	Improved access for underserved people and the general population overall	Short-term								
	Action 2 Expand mobile clinics for area C											
1.2.1	Increase the number of mobile health units in Area C communities, build upon existing vaccine carrier vehicles, and address immediate needs to respond to service disruptions that result from the ongoing crisis	Increased number of mobile health units with at least one per directorate (n=14)	Improved access for nomadic populations and those affected by current conflict	Short-term								

Objectives

Annex 3: Primary Health Care (other than cancer) action plan for West Bank

Background:

Primary health care (PHC) is a health system strategy to address the needs of the most significant number of people through effective and evidence-based approaches to the full spectrum of health services (promotion, prevention, clinical care, rehabilitation, and palliation). The World Health Organization's (WHO) strategic approach is to reach universal health coverage and other health-related sustainable development goals.

PHC is the founding block that provides the most significant returns for the most common health concerns. Based on a mature PHC infrastructure, secondary and tertiary care deliver additional benefits with the most advanced technologies. In addition, it is the basis, on which emergency preparedness and response plans, can address system resilience.

The European Investment Bank (EIB), in consultation with Palestinian Authorities, mandated WHO to support the development of two investment <u>plans</u>; one for oncology services and one for PHC. Following thorough assessments in the West Bank and Gaza, action plans, have been developed, with the Ministry of Health (MoH). This document presents the PHC component for the West Bank only, as the Gaza assessment requires important revisions due to the ongoing crisis.

The PHC action plan has been designed to complement the overarching national health sector strategies. Among its seven objectives, several activities are led and managed at the ministry level and encompass the whole health sector. Where relevant, this indicates to reflect that proposed activities are already implemented for PHC within a broader scope.

General objective:

In Palestine, ensure geographical access to a full range of family medicine services within 30 minutes of residence. Seven main actions are proposed that will serve as the basis for granular costing of capital investments and implementation planning. As this vision requires a long-term perspective (horizon 2035), each activity has a timeline that includes short, medium- and long-term perspectives.

Initially, short-term priorities will be identified with government officials for capital expenditures to be submitted through the investment plan. The full-cost action plan will provide a basis for financial dialogue to build a robust PHC system by 2035.

Goal: In Palestine, ensure geographical access to a full range of family medicine services within 30 minutes of residence

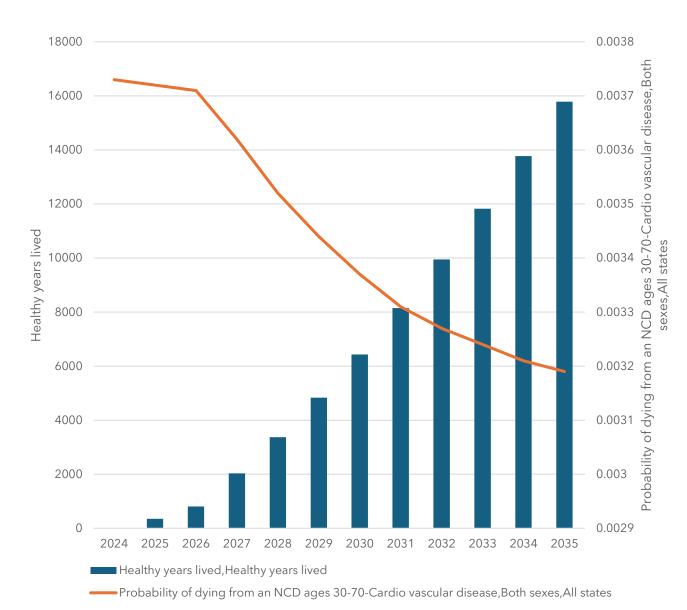

Objective 2: Increase workforce density to ensure level 3+ staffing of each facility by 2035

Inputs	Activities and strategies	Outputs	Outcomes	Risks and mitigation Measures
Funding, HR capacity, firm (supplier)	Increase training capacity of medical, pharmacy, dentistry, nursing, and midwife schools by 2026 towards family practice	 Increased capacity to train human resources that can deliver the full-service package. Advanced practice curriculum developed and implemented through nursing and medical schools 	Adequate quantity, competency levels, and distribution of a committed multidisciplinary primary healthcare workforce	Risk: The freeze on recruiting new personnel at PMoH is not lifted
Funding, HR capacity, individual (supplier)	Develop a sustainable staffing plan for primary care with multidisciplinary teams (with the Ministry of Finance and General Staff Counsel)	 Staffing plan prepared Availability of 1 general practitioner with a multidisciplinary team in each health centre Specialized functions (lab, dieticians, etc.) being provided in some points of service 	UHC service coverage (index) [SDG 3.8.1]	Mitigation: Early collaboration with PMoH and MoF to ensure new personnel are accepted and added to the organizational structure or that a new recruitment method (external contract) can be used

Expected Benefits

- Among the expected outputs in the short run (1 to 3 years) include:
- 107 number of clinics refurbished and fully equipped to provide multi-disciplinary family practice care from promotion to palliative care
- Increased number of mobile health units, at least one per directorate
- Availability of 1 general practitioner with a multidisciplinary team in each health center
- 358 number of facilities equipped with electronic health records
- Updated full package of essential health services
- 70 training conducted for (2860) health workers and community health workers

Longer-run

Resource Requirements

	Projects (2025-2035)										
Action blan	Project 1: Enhance primary healthcare services through infrastrcutural development of mobile clinics, technological integeration, community										
ction no	engagment, patient support and goverance reform in the West Bank by 2035	Procurement type	Cost USD								
	Objective 1: Expand mobile clinics for area C										
1.2	Action 1 Add new mobile clinics to area C	Goods	1,024,6								
	Objective 2: Expand the health information system to each public facility with linkage (
	integration) to hospital based HIS and in the future also with private sector		-								
	Action 1. Finalize and endorse eHealth strategy with Palestine National Institute of Public Health (PNIPH)	TA International	26,5								
	Action 2. Establish DHIS-2 based family health registries in each public primary care facilities	Firm / Individual/MOH	994,8								
4.3	Action 3. Equip every public primary care facility with electronic health records	TA International	266,6								
4.4	Action 4. Strengthen DHIS2 Team department to ensure capacity for implementation, maintenance and scale- up of DHIS-2 based family health e-registries	Others (Government counterpart)	6,4								
4.5	Action 5 Recruit central level staff for DHIS 2 platform	Others (Government counterpart)	3,628,8								
4.6	Action 6. Enhance data collection and use with regular surveys, dashboards, quality of care indicators and inclusion of primary care indicators	TA International	26,5								
4.0	Objective 3: Engage communities in health promotion and support to patients	TA International	20,0								
6.1	Action 1. Develop operational plan for community engagement	TA National	33.9								
	Action 1. Develop operational plan for community lengagement Action 2. Promote and develop community health workers networks in support of patients	TA International	121,								
0.2	Objective 4: Review and update existing governance mechanisms	TA International	121,0								
7 1	Action 1. Ensure a comprehensive chain of supportive supervision across each level of the system	TA National	36.								
	Action 2. Develop operational plan for non-government engagement to ensure effective stewardship	TA International	9,2								
	Action 3. Engage non-health sectors with health promotion and prevention efforts	TA National	23,5								
	Action 6. Test mechanisms to improve health system utilization	TA International	30,0								
	Action 7. Improve empanelment/registration	TA National	10,9								
	Action 8. Unify clinical protocols/care pathways	TA International									
	Objective 5: Ensure 100% availability against the national essential medicines list										
3.1	Action 1. Maintain the essential medicines list along the updated primary care service package	TA National	7,1								
3.2	Action 4. Enhance the regulatory process towards improved registration of health products	TA National	7,0								
	Action 5. Develop e-registration of health products within the logistics management information system (LMIS) through a common platform	Goods	14,								

Brief project summary

The project aims to enhance primary health care in the Hebron governorate by focusing on improving primary care infrastructure by establishing new level 3 or 4 primary health care facilities or upgrading existing centers. This is in addition to adjusting staffing needs and essential medications to meet the restructured primary health care system's needs. This will improve geographic access to comprehensive primary health care services. This will contribute to addressing the various community health needs and will result in improving overall health outcomes.

	Strengthen primary healthcare by 2035 through improved access, adequate staffing, essential medicine, and comprehensive health services in the Hebron governorate (North Hebron, Hebron, and South Hebron health directorates)									
	Component 1: Enhance primary care infrastructure to improve geographic access (based on population growth projections until 2035)									
Project Description :	 Establish new level 3 or 4 facilities to ensure access within 30 minutes according to the situation Upgrade clinics to higher levels to ensure full family service Ensure operating and maintenance budget (other than salaries) for the whole system Adjust staffing to meet the needs of the restructuring PHC system and enhanced DHIS2 platform Component 2: Implement the full package of essential health services Provide drugs and supplies for increasing coverage of all PHC 									
	<u>interventions</u> - Medical supplies required for the increased service coverage									
	Civil work \$ 6,850,957									
	Project Management \$ 548,077									
Project Cost Structure:	Estimated Project Cost \$ 7,399,034									
	Others (drugs and medical supplies; government counterpart)									
	\$ 60,715,262
